- Tips for Getting your Fingers Dirty

What is Programming?

A computer program is

a sequence of instructions

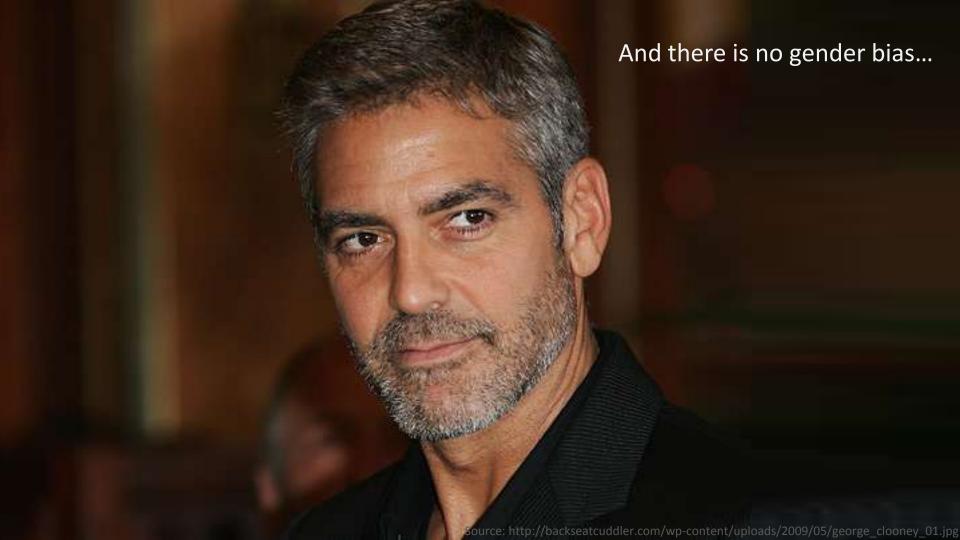

written to perform a specified task

for a computer.

Source: http://en.wikipedia.org/wiki/Computer_program

Computer *IS* our secretary

Hello World Program

```
Sub helloWorld()

Debug.Print "Hello World"

End Sub
```

More Hello Worlds

```
Sub helloWorld2()
   MsgBox "I am a pretty little box!", vbOKOnly, "Hello World"
End Sub
Sub helloWorld3()
   ActiveCell.Value = "Hello World!"
End Sub
```

Programming Concepts

Variables

Operators

Conditions

Loops

Exception Handling

Modularization

Commenting, Documentation, Help

Forms, Buttons & Graphical Elements

Variables

Little boxes where computer keeps the data while doing the work

Operators

Conditions

IF then ELSE

SELECT

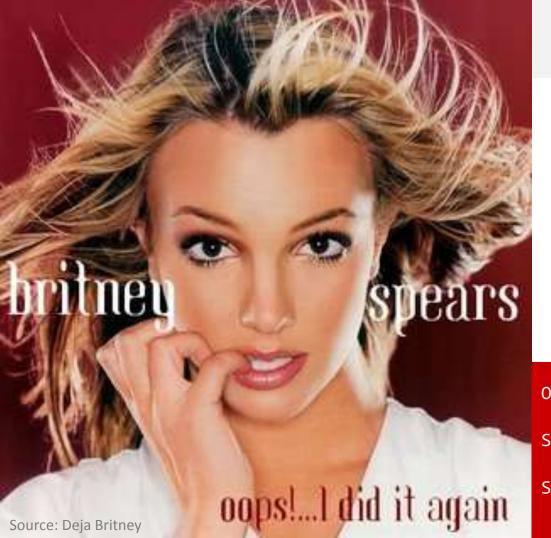

AND OR NOT

LOOPS

FOR

WHILE

GOTO

Exception Handling

On Error Play "Oops!... I did it again"

Something else..

Something else..

Modularization

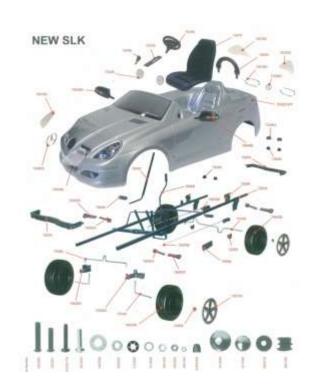

A car is not really a car,

It is thousands of parts carefully

put together

So is any computer program

It is made up of other smaller computer programs

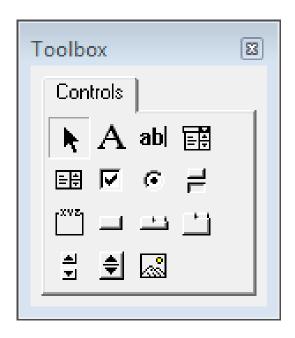

Commenting, Documentation etc.

 Pieces of code that we write to tell ourselves what is going on

Computers ignore comments

Graphical Elements

Buttons Tabs

Radio Buttons Scrollbars

Option Buttons Images

Combo Boxes So much more...

Programming Concepts - recap

- Variables
- Operators
- Conditions
- Loops

- Exception Handling
- Modularization
- Commenting, Documentation, Help
- Forms, Buttons & Graphical Elements
